JUN 21 1960
WEATHER BUREAU

## General Summary of Weather Conditions

April 1960 was fairly close to a normal April in most areas of Canada. Temperatures for the most part ranged fairly close to seasonal values. There was an area to the north of the Peace River with mean temperatures about six degrees above normal, and stations in southeastern Franklin reported mean temperatures six to eight degrees below the usual April values. Precipitation was below normal in the Maritimes, in most of Saskatchewan, Alberts, and interior British Columbia, and generally throughout the Northwest Territoreis, and above normal in most of Ontario, southeastern Manitoba, and along the Pacific Coast.

There were few significant storms during the month. Storms entered from the Pacific Coast either near Seattle or further south, and thence either across the United States and northward through Ontario, or continued along a route well south of the International Boundary. Persistent blocking action in the mid-Atlantic resulted also in the relatively dry conditions prevailing in the Maritimes.

In British Columbia, sunny warm weather early and late in the month compensated for cool, moist weather in the middle fortnight. Temperatures averaged, therefore, very close to normal. Precipitation was excessive on most of Vancouver Island, and in the Lower Fraser Valley there were spotty excesses and deficiencies. Victoria's inch-and-a-half of rain was an excess of a third of an inch, but an inch-and-three-quarters at Vancouver was a deficiency of nearly an inch. The interior was for the most part dry, although there were falls of about twice normal in a small region of the Columbia Valley to the south of the Arrow Lakes. Northward, the month was quite remarkably dry, with an unusual amount of bright sunshine. Half the month's precipitation at Prince George occurred on the 12th, as a thunderstorm piled up 2.8 inches of snow pellets.

It was a notably windy month in British Columbia, particularly in the stormy period of mid-April. On the 12th, Cape St. James, the southern tip of the Queen Charlotte Islands, reported an hourly wind speed of 85 miles per hour.

The warm, dry, windy regime of northern British Columbia extended northward into the Yukon. Whitehorse reported mean temperatures four degrees above the April normal. It was a notably dry month with only a trace of snow at Whitehorse - the only month in eighteen years of records without a measurable amount of precipitation.

April temperatures were rather above normal also in the Upper Mackenzie Valley. Precipitation amounts were spotty in Mackenzie and in Keewatin, ranging within fifty per cent of normal. In western Franklin, falls averaged about a third to two-thirds of normal.

In Alberta and Saskatchewan, April temperatures were about normal in the south, but well above normal in the north. The first ten days were dry and warm, and the next ten days about normal; then came a cold spell, with a warming trend at the end of the month. Precipitation was for the most part deficient in this area. From the Battle River northward, April was a dry month, with precipitation amounts about half to a fifth of normal. Edmonton reported a particularly dry and sunny month.

In the period from the 23rd to the 26th, a storm moving slowly eastward south of the International Boundary brought snow to areas of the Prairie Provinces south of the Calgary-Regina-Gimli line. Snowfall amounts ranged up to nearly twenty inches in southwestern Alberta. In Alberta, particularly, the storm was accompanied by high winds and heavy drifting. In most of the area, the snow melted in milder weather of the last two days, but in parts of Alberta some of the snow remained on the ground at the end of the month. As a result of this storm, total precipitation amounts were above normal in the area - more than twice normal at some stations in Alberta and southwestern Saskatchewan.

In Manitoba, cool weather early in the month kept mean temperatures down and in the south the snowstorm of late April gave precipitation amounts above the usual April figures.

In Ontario, April temperatures averaged two or three degrees above normal in southern Ontario, and about normal in northern Ontario. Temperatures were rather cool early in the month, but a pronounced warming trend in mid-month gave warm spells about the 15th and 16th and about the 23rd-24th. On the 23rd, Hamilton and Sarnia reported 86° - the warmest temperature recorded in the country during the month.

Precipitation in Ontario in April was generally above normal. There were spotty small deficiencies in Wellington and Dufferin Counties, along the Detroit River, and in the North Bay-Pembroke area. Elsewhere there were excesses, reaching eighty per cent in a belt from Georgian Bay to Belleville. In northern Ontario, excesses were large, with most stations reporting falls about twice normal. Throughout the Province, the excesses were mostly in the form of rain; snowfall was below normal in northern Ontario, and almost entirely absent in the south. There were no really notable individual storms; rather the whole month was dull, with precipitation spread over a large number of days.

In Quebec, April 1960 was remarkable only for its normality. Temperatures averaged a little above the seasonal in the Eastern Townships, about normal elsewhere in the southern part of the Province, and rather below normal north and east from the Saguenay. Snowfall amounts were generally rather low, but the deficiency was compensated by a general excess of rain, to give total precipitation amounts fairly close to the April normal. Quebec City reported a total precipitation surplus of about an inch, in spite of a snowfall about a third of its usual nine inches.

In the Maritime Provinces, April was a marked change from the preceding months, in that it was for the most part remarkably dry and sunny. On the 4th-5th, a coastal storm moved rapidly northward through New Brunswick. Rain was general in the Maritimes from this storm, but its greatest effects were felt in southwestern New Brunswick. Saint John reported over three inches of rain from this storm - 70 per cent of its total month's fall. Totals for the month, therefore, show a few surpluses along the coast from Saint John to St. Andrews. On the 22nd, an unseasonably late snowfall brought five to six-inch snowfalls to western Nova Scotia and the southwest coast of New Brunswick. For the remainder of the month, the weather was dominated by dry Arctic air, and an unusal amount of sunshine kept temperatures about normal. Total precipitation falls ranged from about two-thirds normal in most of New Brunswick to about half normal in Nova Scotia and Prince Edward Island. In the latter half of the month, the forest fire hazard became critical in Nova Scotia, and numerous fires were burning over large areas.

On the Island of Newfoundland, also, April was for the most part a dry month, with no really large amounts on any one day. St. John's reported only about a quarter of normal precipitation for April; .43 inch of rain was a new, low nineteen-year record for April, and the addition of only 7.1 inches of snow yielded also a low record for total precipitation. In central Newfoundland, snowfalls were larger; Gander reported a very cloudy month, with a total snowfall six inches in excess of the normal thirteen inches.

In Labrador, snowfalls were heavy; Cape Harrison reported 52 inches of new snow. At the end of the month, several stations in Labrador still had a snow cover of over four feet.

In eastern Franklin, also, the month was very dry, with falls ranging from a half to a fifth of the April normals. Temperatures were below normal. Eureka again had both the lowest temperature in the country, - 45°F., and the lowest mean temperature, - 22°F.

At the end of the month, snow cover in Canada was restricted to a line joining Aklavik to Lake Superior to Newfoundland.

# APRIL 1960
# TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
